

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

Read more about Early Journal Content at <http://about.jstor.org/participate-jstor/individuals/early-journal-content>.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

CONTINUITY.¹ II

CONTENTS

<i>The British Association for the Advancement of Science:—</i>	
<i>Continuity. II.: SIR OLIVER LODGE</i>	417
<i>The Teaching of College Biology: DR. A. J. GOLDFARB</i>	
	430
<i>Mexican Archeology and Ethnology</i>	436
<i>The American Fisheries Society</i>	437
<i>Chemistry at the Atlanta Meeting of the American Association</i>	
	438
<i>Scientific Notes and News</i>	438
<i>University and Educational News</i>	441
<i>Discussion and Correspondence:—</i>	
<i>A Bit of History: DR. MARCUS BENJAMIN.</i>	
<i>The Law of Priority: THOS. L. CASEY ...</i>	441
<i>Scientific Books:—</i>	
<i>Percival's Geometrical Optics: PROFESSOR W. LE CONTE STEVENS. Ramaley and Griffin on the Prevention and Control of Disease: DR. E. L. OPIE</i>	
	443
<i>Special Articles:—</i>	
<i>On Inducing Development in the Sea-Urchin, with Considerations on the Initiatory Effect of Fertilization: DR. OTTO GLASER</i>	
	446
<i>The Society of American Bacteriologists. III.:—</i>	
<i>Pathologic Bacteriology; Immunity Bacteriology: DR. A. PARKER HITCHENS</i>	
	451

MSS. intended for publication and books, etc., intended for review should be sent to Professor J. McKeen Cattell, Garrison-on-Hudson, N. Y.

THE so-called non-Newtonian mechanics, with mass and shape a function of velocity, is an immediate consequence of the electrical theory of matter. The dependence of inertia and shape on speed is a genuine discovery and, I believe, a physical fact. The principle of relativity would reduce it to a conventional fiction. It would seek to replace this real change in matter by imaginary changes in time. But surely we must admit that space and time are essentially unchangeable: they are not at the disposal even of mathematicians; though it is true that Pope Gregory, or a daylight-saving bill, can play with our units, can turn the third of October in any one year into the fourteenth, or can make the sun south sometimes at eleven o'clock, sometimes at twelve.²

But the changes of dimension and mass due to velocity are not conventions, but realities; so I urge, on the basis of the electrical theory of matter. The Fitzgerald-Lorentz hypothesis I have an affection for. I was present at its birth. Indeed I assisted at its birth; for it was in my study at 21 Waverley Road, Liverpool, with Fitzgerald in an arm chair, and while I was enlarging on the difficulty of reconciling

¹ Address of the president of the British Association for the Advancement of Science, Birmingham, 1913.

² In the historical case of governmental interference with the calendar, no wonder the populace rebelled. Surely some one might have explained to the authorities that dropping leap year for the greater part of a century would do all that was wanted, and that the horrible inconvenience of upsetting all engagements and shortening a single year by eleven days could be avoided.
